

RISK

DON'T ROLL THE DICE.

IT Risk Assessment Services

Digital risks aren't confined to unique machines or systems. Technology risks threaten operations, growth, and customer trust. By proactively addressing IT risks, you'll secure critical information and your organization's future. Here's how Securance helps.

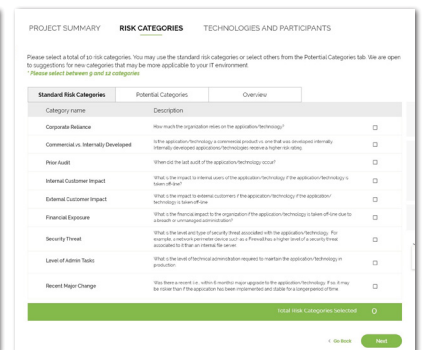

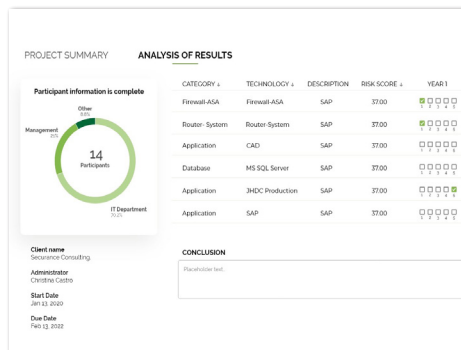

IT Risk Assessment

We perform a comprehensive evaluation of people, processes, and technologies, supporting the IT organization, so you can identify and mitigate risks before they harm the business. Securance can align this assessment with any risk management, security, or control framework, including:

- ▶ CIS Controls
- ▶ COSO
- ▶ NIST SP 800-30
- ▶ COBIT
- ▶ ISO 27001 and 27002
- ▶ NIST SP 800-53

SCGRC Risk Assessment

We use our proprietary risk assessment tool, SCGRC, to conduct an opinion-based IT risk assessment, develop a technology risk matrix and multi-year audit plan. Our SCGRC risk assessment helps internal audit teams focus their efforts on the most critical risks to sensitive data and systems, maximizing cost-effectiveness and value.

For Risk Management, Think Securance

When it comes to business, you can't afford to gamble. Instead, let Securance protect your operations and technologies by proactively identifying risks to the IT environment.

Contact Securance today or visit our website to learn more.
