

BETTER LEADERSHIP FOR LESS.

Virtual Chief Information Security Officer

As businesses increase their reliance on technology, and cyber threats continue to evolve, dedicated cybersecurity leadership becomes essential.

An effective Chief Information Security Officer (CISO) empowers a business to operate at its peak, while keeping corporate and customer data safe from malicious actors. But, with the average total compensation for a CISO at a steep \$550,000, recruiting and retaining a security leader is cost-prohibitive for many organizations in the United States. Fortunately, there's a solution: the virtual CISO, or vCISO.

Securance's vCISO packages deliver information security expertise and executive advisory services for a fraction of what an in-house resource would cost. They provide the perfect balance for budget-conscious organizations that need C-level security without breaking the bank.

As your vCISO, Securance will design, implement, and oversee an industry-standard cybersecurity program, including:

- Board presentations and participation in executive meetings
- Cybersecurity strategic planning
- Governance framework development
- Disaster recovery and incident response planning and exercises
- Security operations
- Real-time event and incident management
- Vendor risk management
- Annual IT risk assessments and security testing
- User security awareness training
- Regulatory compliance

Effective security strategies don't come out of a textbook.

As your vCISO, Securance will learn your technology environment, compliance and security requirements, and overarching business goals-- just as an internal CISO would. We will be an extension of your team, working in tandem with your IT leaders and staff to implement effective processes, proactively mitigate technology risks, and continuously improve your security posture.
