

# CALL THE EXPERTS

## IT Staff Augmentation Services

**Rapid changes in technology and the cyber threat landscape mean that companies and agencies need specialized IT expertise to complete projects and achieve their objectives.** However, the cost of recruiting and retaining qualified resources can be prohibitive, especially for projects of limited scope and duration. In cases like this, engaging a third party to provide experienced staff is typically more cost-effective.

Through our staff augmentation services, Securance helps organizations close skill gaps, boost the depth and size of internal teams, and meet tight deadlines on IT and cybersecurity projects— without the expense, hassle, and pressure of hiring new staff. Our IT professionals have the technical skills to hit the ground running and the soft skills to integrate seamlessly with in-house staff and report the results of their work to stakeholders.

We provide staff in a wide range of labor categories, including:

- Application Developers
- Business Analysts
- Cybersecurity Analysts
- Cybersecurity Architects
- Cybersecurity Engineers
- Database Administrators
- Database Architects
- Enterprise Architects
- Functional Architects
- IT and Cybersecurity Directors
- IT and Cybersecurity Managers
- Project Managers
- IT Auditors
- Network Administrators
- Network Engineers
- Mobility Managers
- Product Owners
- Quality Assurance Testers
- System Administrators
- System Engineers
- Technical Writers
- User Interface (UI) and User Experience (UX) Designers
- UI and UX Developers

### The Right People Will Get the Job Done

Securance uses an extensive recruiting and interview process to ensure that we provide our clients with staff of the highest caliber. Whether you need technical resources for a short-term project or a longer contract, we are ready to support you and your goals.
